The Amazing 7-Day, Super-Simple, Scripted Guide to Teaching or Learning Percents Lisa Hernandez, M.S. Ed. 2015-02-21 Welcome to The Amazing 7-Day, Super-Simple, Scripted Guide to Teaching or Learning Percents. I have attempted to do just what the title says: make learning percents super simple. I have also attempted to make it fun and even ear-catching. The reason for this is not that I am a frustrated stand-up comic, but because in my fourteen years of teaching the subject, I have come to realize that my jokes, even the bad ones, have a crazy way of sticking in my students' heads. And should I use a joke (even a bad one) repetitively, the associations become embedded in their brains, many times to their chagrin! What is so different about this book? First of all, it is scripted, so that tutors, parents and teachers alike can deliver the lessons easily and without frustration. Secondly, the scripts and lessons have been carefully crafted to be ageless -- that is, to apply to any learner, based on age or level of mathematical mastery. Finally, the lessons have been carefully culled and edited over a decade in order to include the most necessary information in a finite and reasonable timetable, something (in this educator's opinion) other books seem to lack.

Inside Mathforum.org Wesley Shumar 2017-09-07 The internet has dramatically transformed social space and time for many people in many different contexts. This dramatic warping of the social fabric has happened slowly over time as digital technologies have evolved and internet speeds have increased. While we are all aware of these changes, the impact is often little understood. There are few monographs about social groups made possible by the internet, and even fewer about educational communities made possible through digital technologies. Inside Mathforum.org details the ways that digital media are used to enhance the practices that teachers and students of mathematics engage in. The book also shows how different kinds of mathematical conversations and interactions become possible through the digital media. Unlike many other educational uses of digital media, the Math Forum's community has provided online resources and sustained support for teachers and students, and it leads the way in showing the power of digital media for education.
